

# The Nordic 2084

A piece of fluorescing fabric that **signals direction of movement** based on handlebar interactions

Large Frame surface area :

- 1) **Looks neutral** when not in use
  - 2) **Collects solar energy**,
  - 3) Can **change colors** to create a proximity signal or a camouflage.
- (The storage case set in the frame can also do this.)*

A Bluetooth like link up to create a **micro network** with all clothing and accessories

Handle bars with sensors that provide **traffic signals** based by swiping left or right across the bar under the pogies

**Pogies** that are networked and are made from cloth that can look both like plain fabric or can fluoresce to **display information** to the cyclist or send signals.

**Integrated ubiquitous scent output** device that masks human scent when not in the city and in proximity to wildlife.

Fat airless bike **tires** optimized for **winter riding**

Hub charging system that creates **ongoing electricity supply** for for all components.

**Full E-assist Winter Riding Available Now!**

**Connected | Responsive | Safe**
